

Westfield St Lukes Retrofit

A retrofit project involving the replacement of 6 existing AHU units with 6 new EPI Clever AHU units ranging in size from 20,000 l/s to 33,000 l/s. We were also tasked with upgrading the BMS controls and installing a 400 kw Trane winter duty chiller complete with new cooling tower and pumps. Due to the difficulty of accessing the rooftop AHU a helicopter was required to lift each section on to the roof.
